(Subject to the approval of Pakistan Engineering Council (PEC)).**

### About the Seminar

Technology in some form or other has been an essential factor in the relentless march of human civilization for a better future but recent technological development are posing a grave threat to human employment. Technology developments started from Stone Age with the development of agriculture and hunting tools followed later by the invention of wheel. Industrial revolution which began in 18<sup>th</sup> century was a major step in industrialization through technology. The digital transformation started during later part of 20<sup>th</sup> century with the development of digital computers and the information and communications technology. Technology developments throughout history have generally resulted in loss of some existing jobs due to development of labour saving devices.

**FREE**  
REGISTRATION
